

# FAIRVIEW SELECT™

## Fairview Select Fungicide University Study

Dr. Paul Koch, University of Wisconsin-Madison

### Trial Objective

To determine the efficacy of Fairview Select compared to Traction™ for controlling dollar spot caused by the fungus *Clariireedia* spp. on a creeping bentgrass putting green.

### Materials and Methods

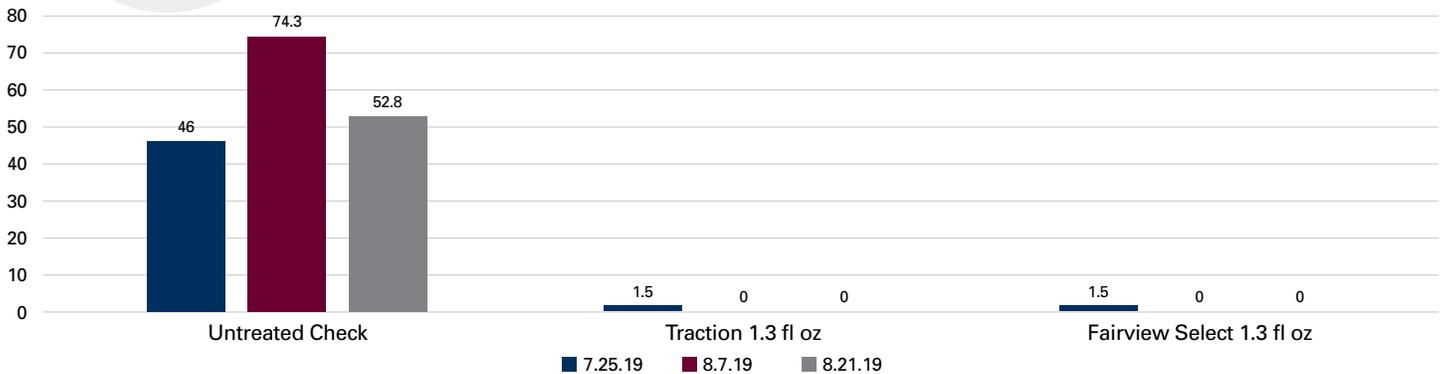

- Trial was initiated on May 23rd 2019 and concluded on August 21st 2019.
- Each product underwent 4 replications. There was an untreated controlled plot for fungicide comparisons. Testing plots were 3ft by 5ft.
- Fungicides were applied every 14 day for the duration of the study.

- Number of lesions were counted in the center of each plot.
- Turf quality ratings are based on a 1-9 scale: 9 = best quality, with 6 being commercially acceptable.

### Trial Results and Conclusions

- Fairview Select (1.3 oz per 1000ft<sup>2</sup>) provided control of Dollar Spot statistically equal to Traction. Both fungicides provided excellent season long disease suppression.
- Fairview Select (1.3 fl oz per 1000ft<sup>2</sup>) had great turf quality rating, well above commercially acceptable levels.
